

# VERSION MAP

07.2012

Map of project evolution; showing prototypes & the full team of collaborators. What, who, where next?

## FUTURE GOALS

**Structural Improvements**  
Vital advances in structural performance and materials efficiency, plus wider gauge for more design flexibility on doorways etc. Requires funding & support.

**New Materials**  
Development of system to work with alternative materials such as recycled boards, recycled plastics and bio-polymers. This will radically improve efficiency and lower cost and access threshold, as well as increasing environmental sustainability. Requires funding & collaboration.

**Delivery Business models**  
Commercialisation of WikiHouse process, offering self-build or assisted-build house kits, where self-builders can co-design then invest sweat equity. Must be both commercially viable but also entirely open in the public domain. Requires funding and legal / business / engineering support.

**The first making community**  
The first house-as-self-replicating-community-factory. The CNC machine within the house that builds the house: focused not just on building a house but on spreading skills and radically lowering the threshold.

**The first fully inhabited house**  
An inhabitable house in a temperate climate. Requires land & funding, and/or both in the form of an innovation-pioneering self-builder.

**The first two-storey prototype**  
WikiHouse system is theoretically based on a max. 2-storey system, but has not yet been prototyped. Requires funding, engineering & structural testing resources.

**Full Plug-in**  
Developing the ruby script to iron-out bugs, label parts more easily, more efficient nesting of parts on layout, and conversion direct from SketchUp to G-Code. Requires skilled coders.

**Parametric WikiHouse**  
A simple API that allows any user to input site info and design house which can be 'printed'. Requires funding and collaboration with skilled coders & designers, possibly including universities.

**OpenDesk Sharing platform**  
Commercialised + open platform for Wiki furniture, which offers services and kits for sale, but also offers all files and instructions for free download.

**Other House Systems**  
Develop open, easy-to-fabricate solutions to other problems around 'house', such as water, sanitation, ventilation, heating, cooking, off-grid energy, services, tools, windows, furniture etc.

If you think you can solve one these challenges, or would like to join, support or fund the WikiHouse project, please email [hello@wikihouse.cc](mailto:hello@wikihouse.cc)
